

## **What kind of patient are you going to be, is our goal the same?**

Congratulations for joining the Health Evolution. I want you to be happy with my care. But sometimes happiness can be spoiled by misunderstanding. Principled Chiropractic has only one goal. It is therefore, important that you understand the goal and the means that will be used to attain it. In this way, there will be no disappointment.

There are two kinds of patients: "Crisis therapy" and "Chiropractic" Crisis therapy patients are obsessed with one idea: to get rid of the pain. They see in chiropractic an alternative to pain killers. They usually quit in the course of their program of vertebral subluxation correction either because the pain is still there: "chiropractic is no good". Or because the pain is gone: "chiropractic is great, I will return when I am in pain again". Don't feel bad if you recognize yourself in this profile. Most of our lifetime chiropractic patients started with that in mind. After all, we all have been formatted this way since we were born; for some it is not so easy to convert to the chiropractic philosophy of life and health as opposed to the treatment of disease and sickness.

Chiropractic patients understand that, by means of adjustments, subluxations are corrected, thus restoring normal nerve function: the goal of chiropractic is to correct vertebral subluxations for the purpose of restoring the proper transmission of mental impulse over nerve pathways so that every part of the body may have a proper nerve supply at all times. This allows the innate healing ability of the body to work at maximum efficiency. With proper nerve supply, health improves. In some, symptoms clear up quickly, in others, the process is slower, and in some, it is only partial or not at all. Regardless of what the disease is called, I do not offer to treat it, nor do I offer advice regarding the treatment of disease or pains.

My only means is correction of the vertebral subluxation, my only goal is to remove the interference and therefore allow the body to do its job. It is with this in mind that I recommended to you a schedule of care for your particular case.

Yours in Health,

JJ
